

Digitalization and Higher Education

Digitalization is dramatically changing the landscape of higher education today. It promotes new forms of teaching and learning and opens for new conceptions of what the university is and should be. During 2022, the Research Group of the European Reform University Alliance will gather people interested in these questions. We welcome participation from both academics and practitioners, such as staff in IT departments, centres of life-long learning, and digital and media labs. You can participate in several ways:

To start the conversation, we have arranged an **online talk** with Marigo Raftopoulos of Tampere University on “The Future of Learning and Innovation: How AI is Changing the Game”, Monday, April 4, 14.15-16.00 CET. The talk will focus on how we can augment the best of human and AI technology to accelerate creativity and innovation and aid both human and machine learning. All are welcome. Sign up at erua@ruc.dk. Additional information about the speaker and the event here: <https://erua-eui.eu/events-calendar/the-future-of-learning-and-innovation-how-ai-is-changing-the-game/>

During the spring, we are collecting **case studies** of innovative courses, which focus on transferring digital skills. If you know about such courses or are teaching them yourself, please notify us at erua@ruc.dk

On September 8-10, we plan a larger **workshop** on “Digital Transformation of Research and Practice in the Reform Universities: Past, Present and Future” to be held at New Bulgarian University (the Sozopol base). The workshop will address how the internet and new digital technologies have affected universities, especially reform universities, in recent decades. Deadline for submission of abstracts May 10. All are welcome. Additional information here: https://erua-eui.eu/wp-content/uploads/2022/02/CfP_WP2_15_02.pdf

If you wish to receive **updates** about our activities in the field of digitalization and higher education, please sign up at erua@ruc.dk
